

4m Xmas tree

Please note: all bolts should not be wound tight until the entire frame is complete.

1) Connect the head piece to the 4 upper frame bars.

2) Join the 4 smallest curved pieces to the 4 upper frame bars.

3) Join the middle frame bars to the upper frame bars.

4) Join the 4 middle size curved pieces to the middle frame bars.

5) Join the lower frame bars to the middle frame bars.

6) Join the 4 largest curved pieces to the lower frame bars.

7) Now that the frame is complete, all bolts can be tightened, starting from the top of the tree.

8) To begin attaching the leaves, start at the top, and attach the loop end of the branches to the 4 top bolts. We recommend putting 5 branches on each bolt and finishing with a nut to hold them in place.

9) Attach the lower end of the top branches to the middle ring by simply wrapping them around it. Once all 20 branches are attached, the top two thirds of the tree will be complete.

10) With the remaining branches, spread them out across the bottom, of the tree by looping them under the very bottom ring and attaching both ends to the middle ring.

11) Now is the time to attach the light ring. Simply sit it over the top of the tree and unwrap each strand to allow it to drape down the tree.

12) The final step is to attach the star using 2 nuts/bolts.
